Professional Summary

Computer Science undergraduate with hands-on experience in Java, full-stack web development, and IoT, focused on building practical solutions through real-world projects, hackathons, and continuous problem-solving.

Education

Chitkara University Punjab
Bachelor of Engineering in Computer Science; CGPA: 8.72/10 *Aug 2024 – May 2028*

Experience

Live Learning Project – IoT Development *Jul 2025 – Apr 2026*

- Developed Arduino and IoT-based projects for academic learning and technical competitions.
- Worked on hardware integration, circuit design, and embedded programming for real-world implementations.
- Completed end-to-end project development, including requirement analysis, testing, and deployment.

Technical Skills

Languages: Java, C++, JavaScript, Python, SQL
Web Technologies: React.js, Node.js, Express.js, MongoDB (MERN Stack)
Developer Tools: Git, GitHub, Postman, Firebase
Core Concepts: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks
AI/ML: NumPy, Pandas, Scikit-learn, Matplotlib, XGBoost
Additional: REST APIs, WebSockets, JWT Authentication, Cloudinary, IoT Development

Projects

Chanakya AI | *Multilingual AI Legal Assistant • React.js, Node.js, LangChain, Pinecone, Gemini API*
- Built a voice-first legal assistant using Retrieval-Augmented Generation (RAG) with LangChain and Pinecone to deliver context-aware legal guidance in multiple languages.
- Engineered a full-stack MERN application integrating the Gemini API and a vector database for low-latency semantic search over legal documents.

Offbyt | *Open-Source npm Package • Node.js, Express.js, MongoDB, AST, CLI, Socket.io*
- Built and published an open-source npm package that statically analyzes frontend code to generate production-ready backend applications without AI or cloud services.
- Implemented AST-based code generation for REST APIs, CRUD, authentication, validation, and middleware across Express.js, NestJS, Fastify, MongoDB, PostgreSQL, MySQL, and SQLite; published with GitHub release automation, JWT/OAuth, rate limiting, and caching.

FahRide | *Student Carpool Platform • React.js, Node.js, MongoDB, JWT*
- Developed a campus ride-sharing platform connecting students for secure carpooling with verified authentication and ride management.
- Integrated Nodemailer and Cloudinary alongside a reward-based engagement system to drive user retention.

MechVerse | *3D Automotive Simulation Platform*
- Built a real-time 3D automotive platform featuring vehicle customization and physics-based driving mechanics.
- Implemented multiplayer gameplay for real-time, synchronized racing sessions across multiple users.

Achievements

Hackathon Wins (3×)

- **FormulaHacks 2025** – Built a customizable car engine interactive simulation.
- **Hacknexus 1.0** – Built an AI-powered multilingual legal assistant using RAG pipelines.
- **Bharat Techx 2.0** – Built an interactive education platform.

Finalist / Semi-Finalist

- **NIT Jalandhar National Hackathon** – Top 4 out of 1000+ teams nationwide.
- **Hack the Vault 2.0** – Finalist.
- **Build With AI (Google)** – Semifinalist.
- **Hack n Win 2.0** – Semifinalist; won $300 MongoDB credits.
